

HiddenHz

A picture hidden in the rain

THE IDEA

How it works

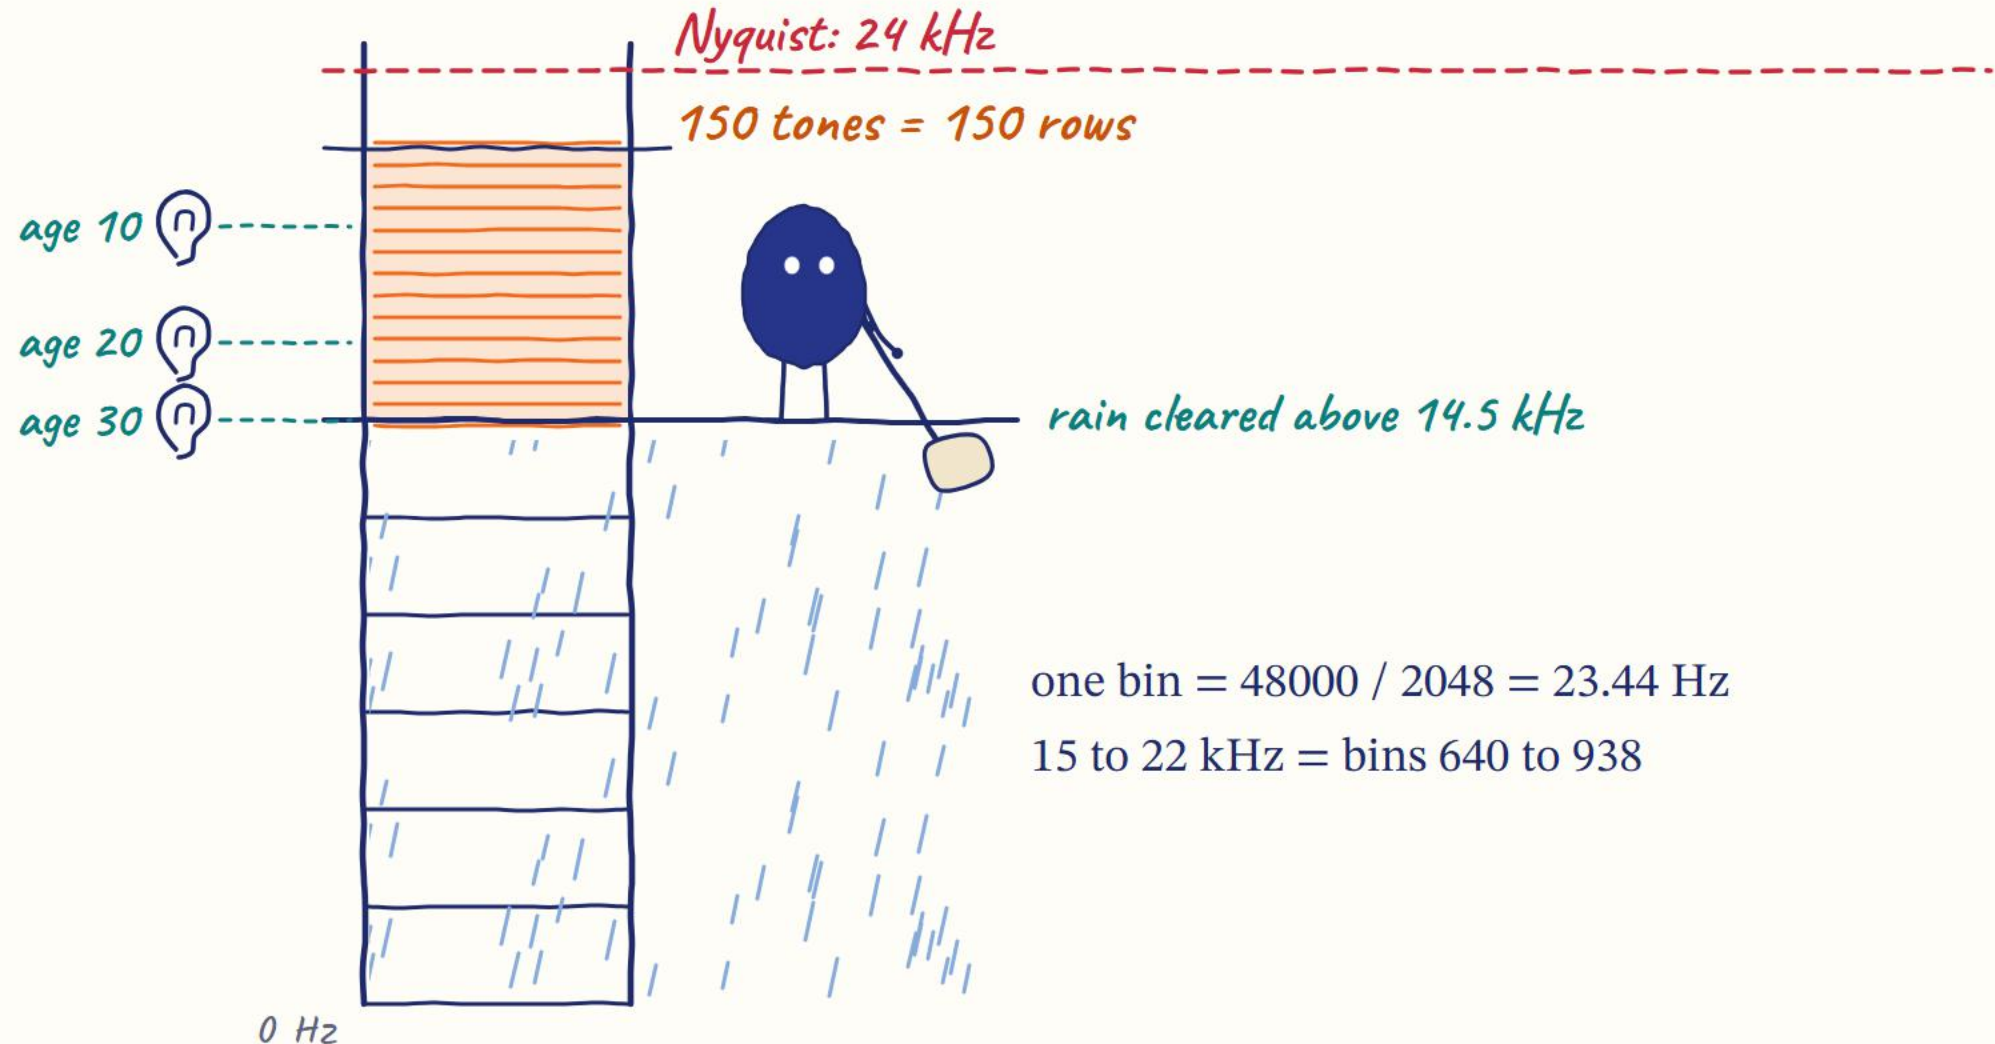

THEORY

A spectrogram is an image

THEORY

Where the picture lives: 15 to 22 kHz

one bin = $48000 / 2048 = 23.44$ Hz

15 to 22 kHz = bins 640 to 938

THEORY

Hann window: keeping tones apart

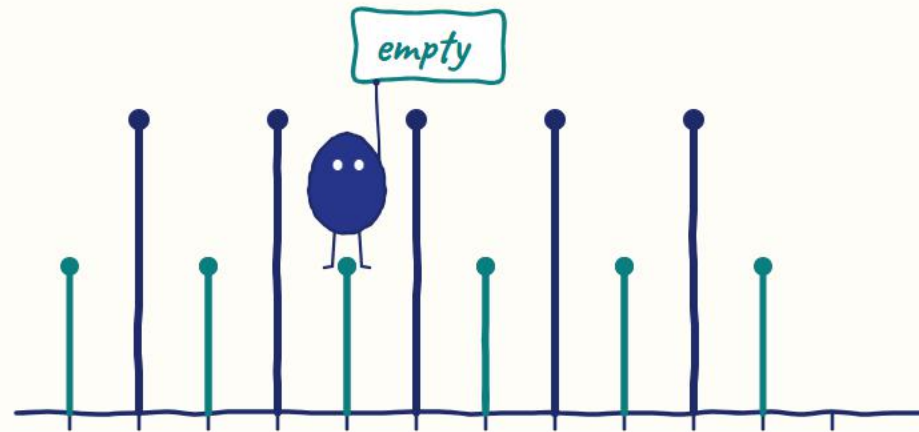

$$w[n] = 0.5 - 0.5 \cos(2\pi n / N)$$

fades the edges, so each tone only spills next door

a hard cut spills everywhere

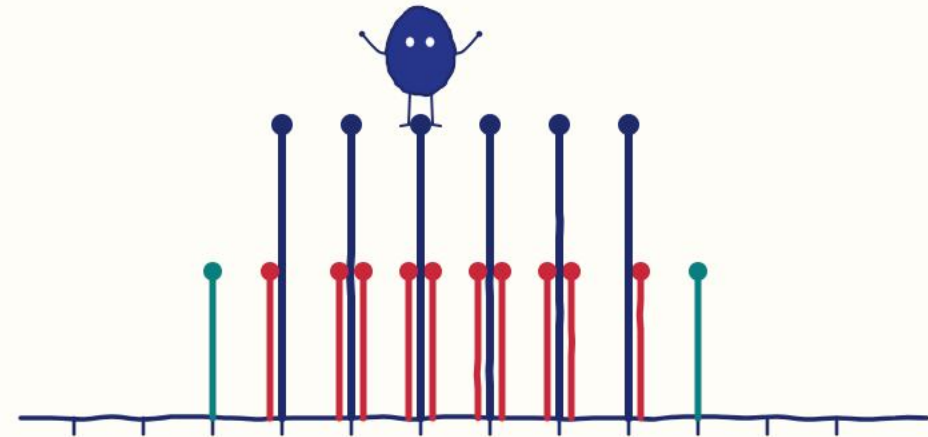

spacing 2 (ours)

quality 0.98

HiddenHz

spacing 1

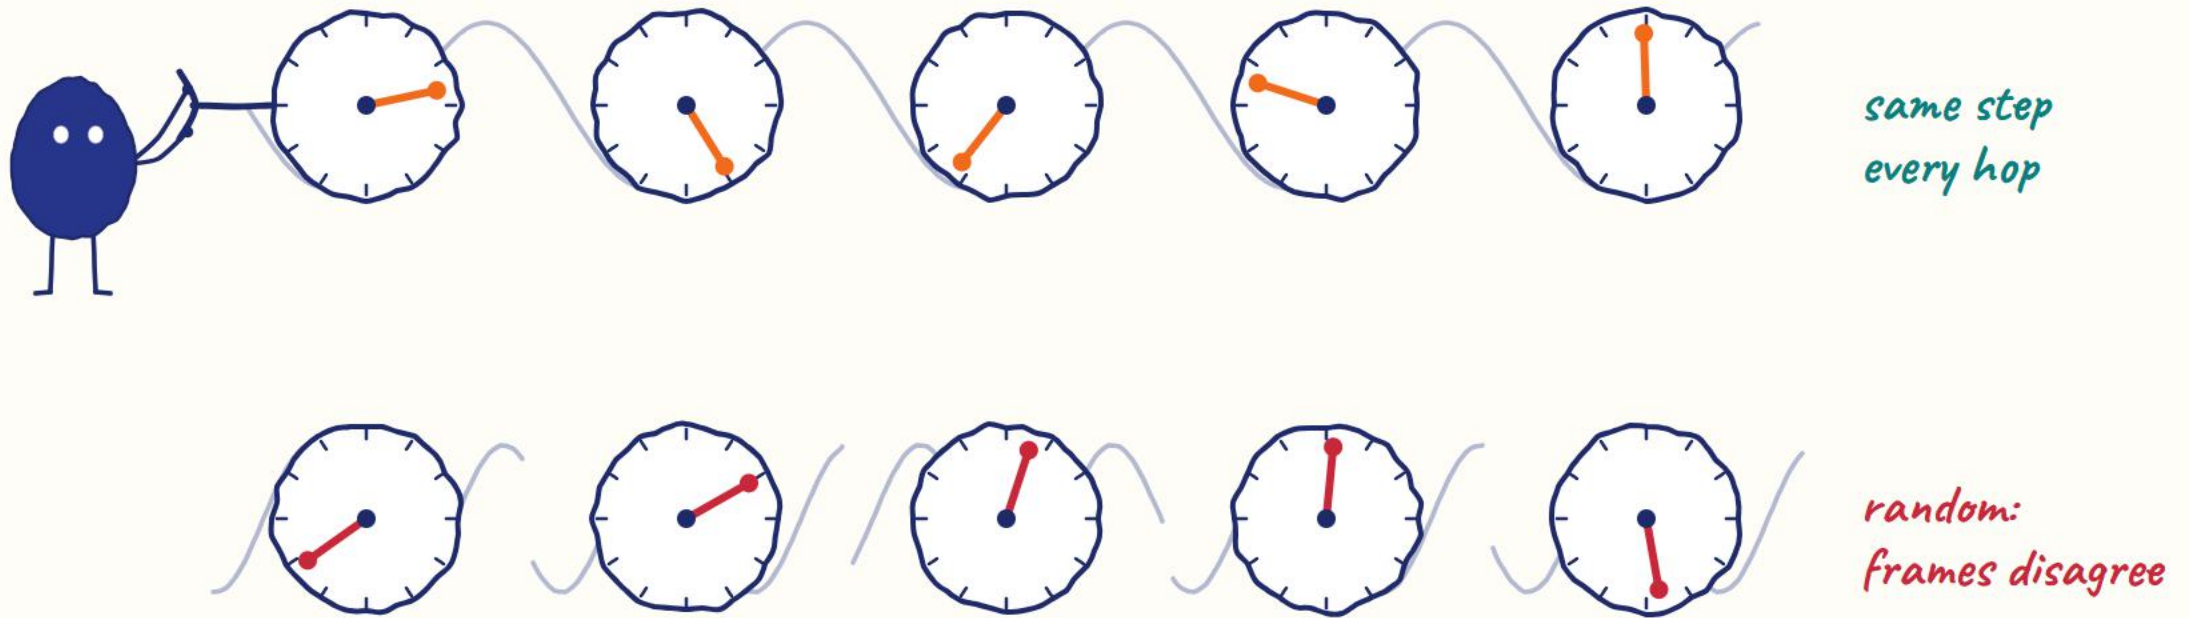

quality 0.59

THEORY

Back to sound: the inverse STFT

$$\varphi[k, t] = \varphi_0[k] + 2\pi k H t / N$$

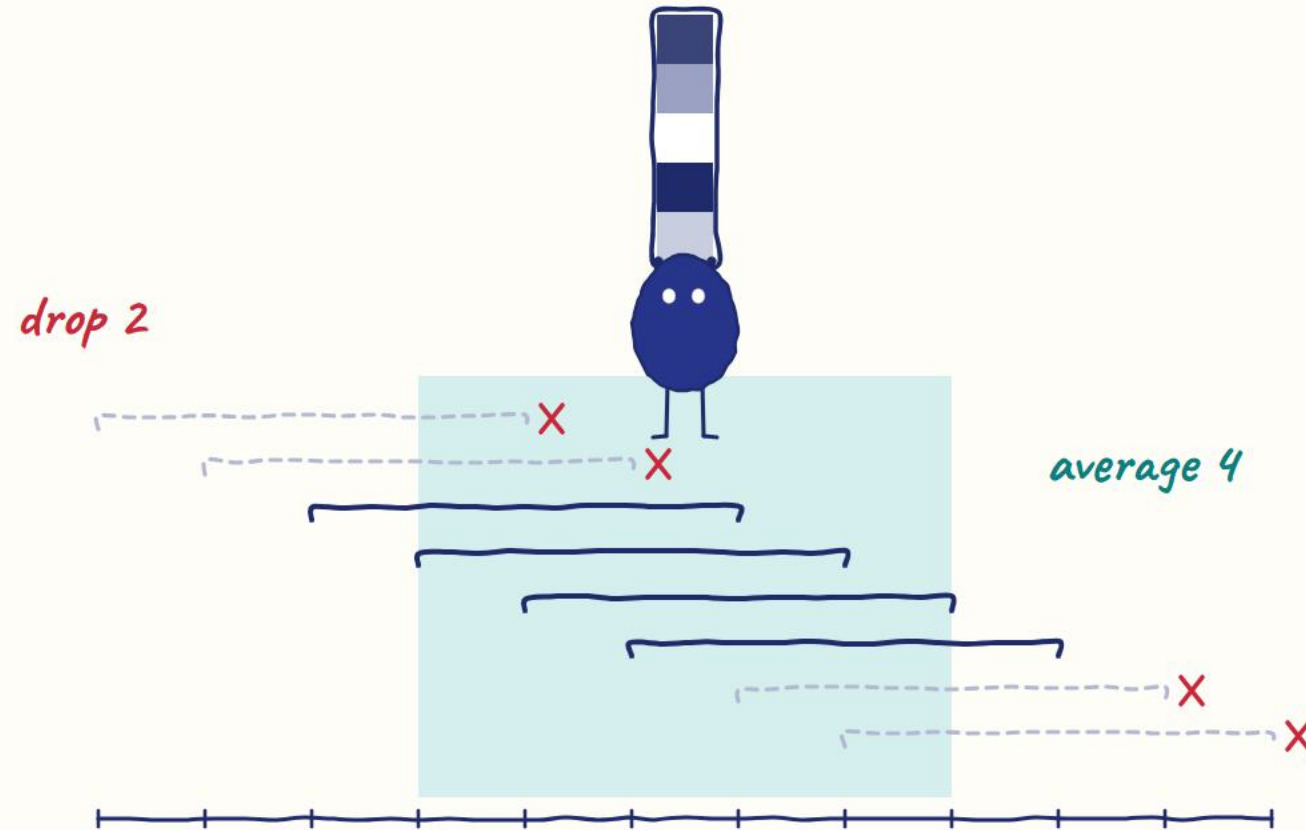

inverse DFT each column, overlap-add, 4 blank frames at the ends

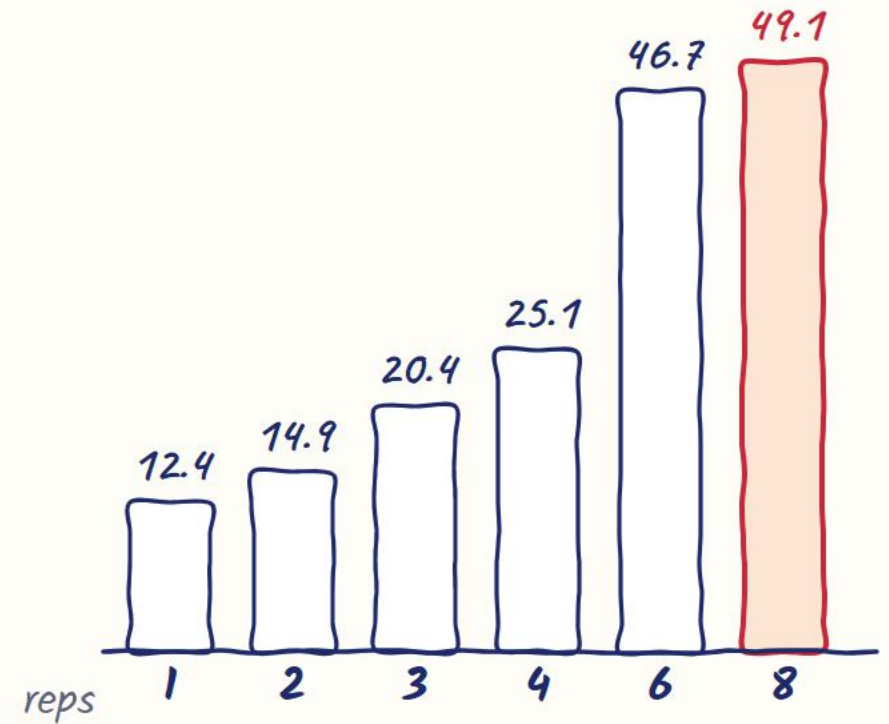

THEORY

Each column lasts eight frames

a frame spans 4 hops, so a column must last longer

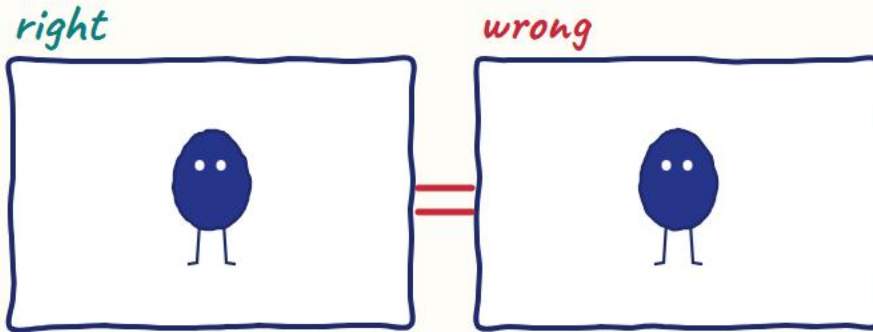

PSNR (dB)

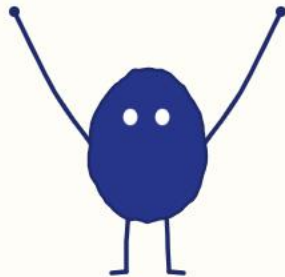

SECURITY

What the password does

random phase?

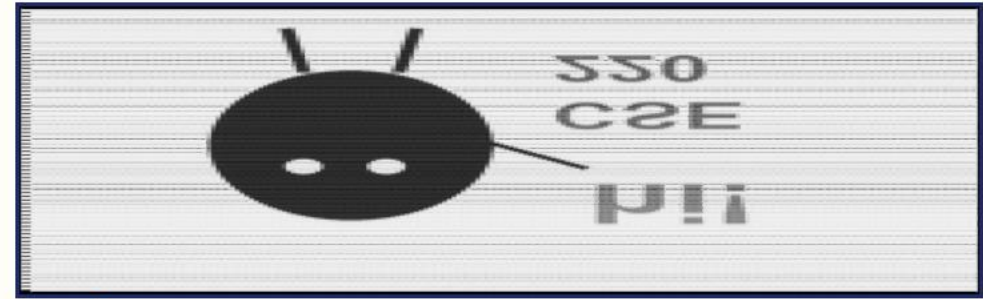

$$0.914 = 0.914$$

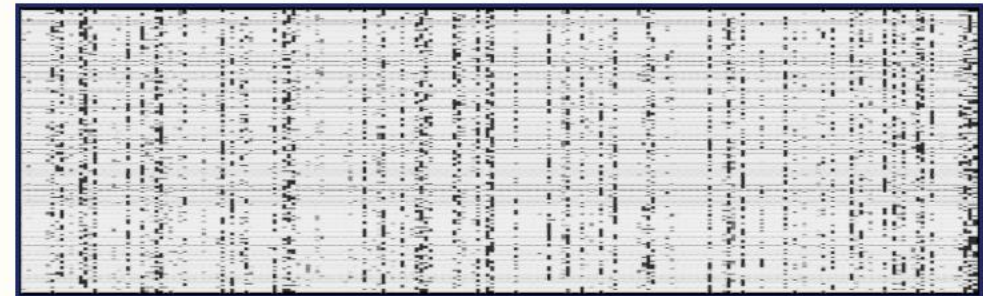

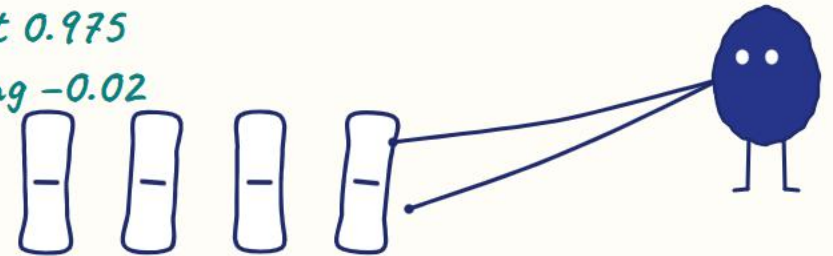

a spectrogram ignores phase

shuffle rows and columns

right 0.975

wrong -0.02

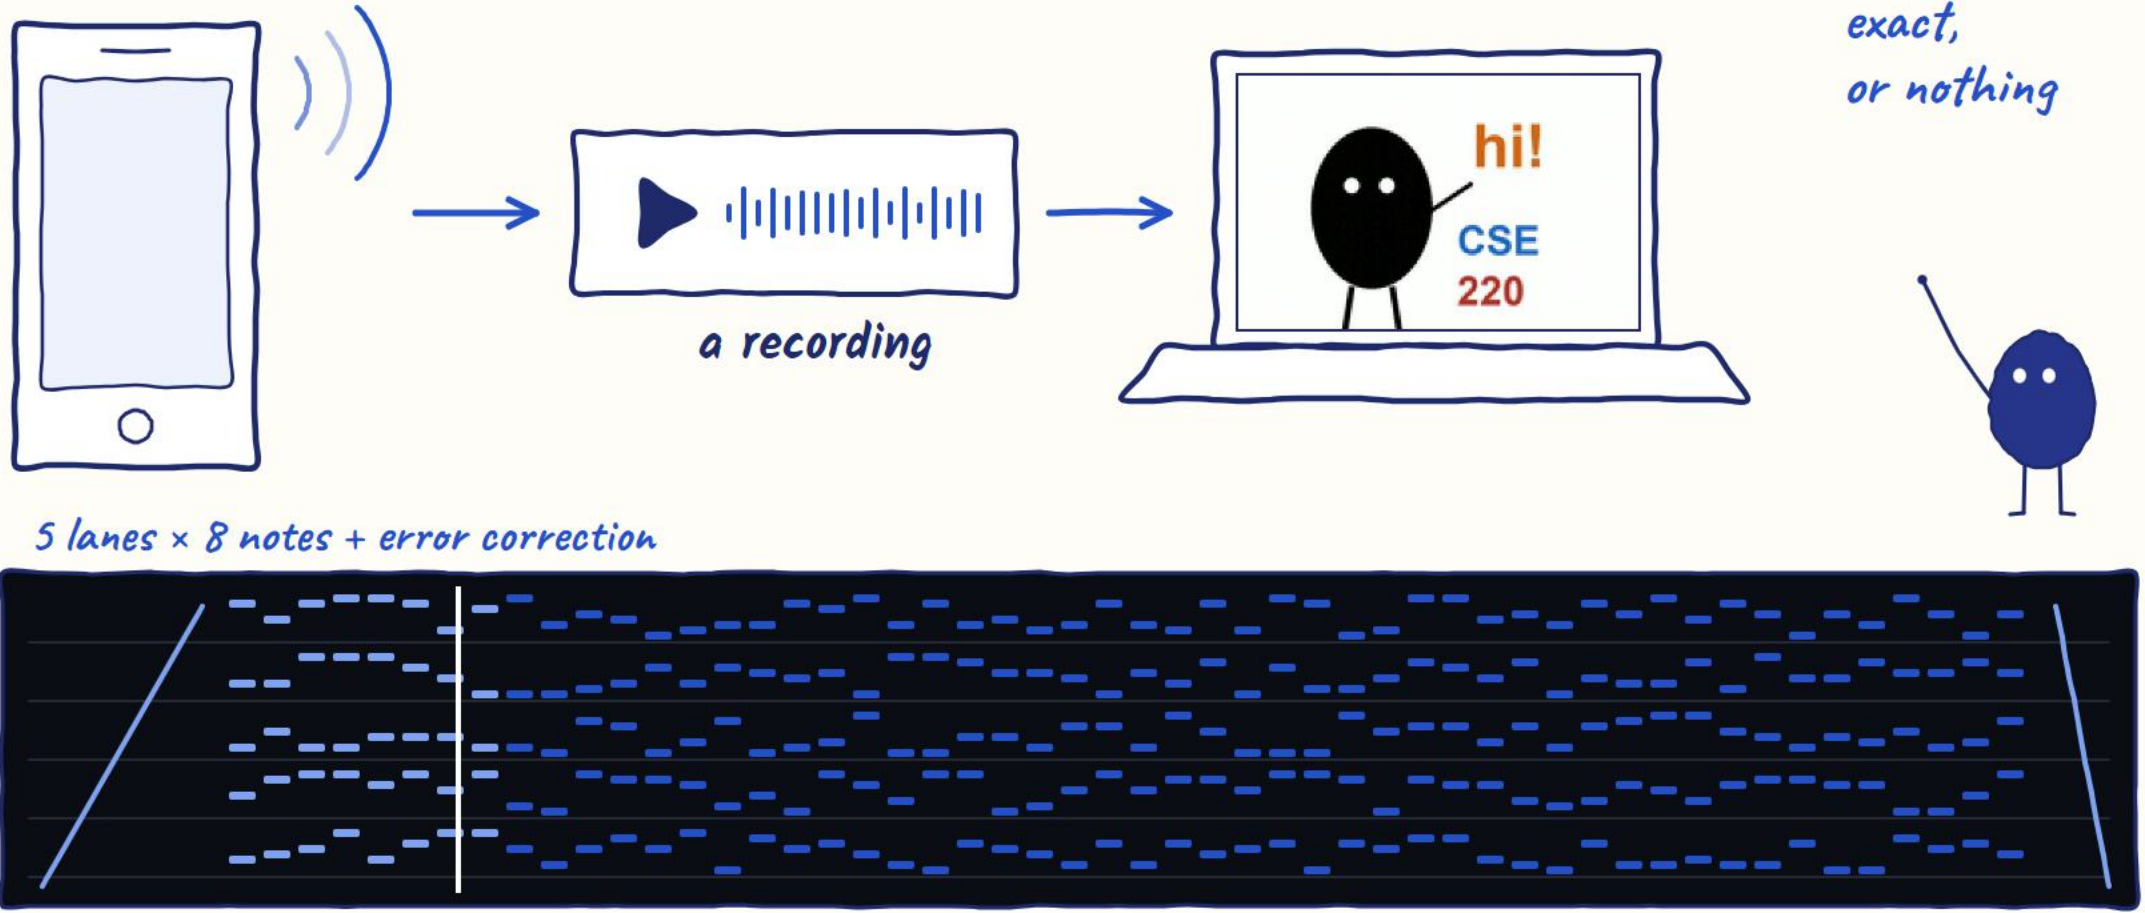

AIR MODE

Air mode: through phones

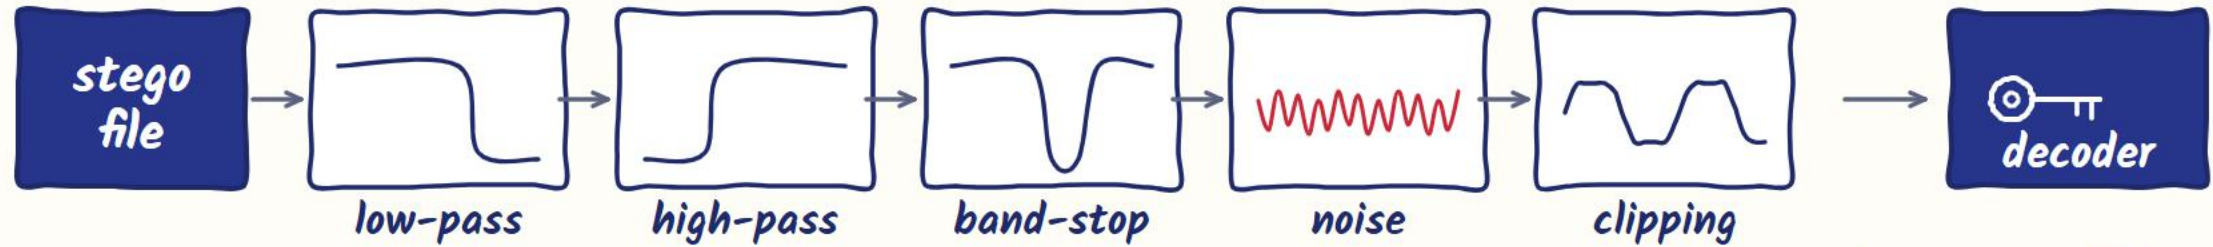

15–22 kHz: gone after a phone

0.75–4.8 kHz: survives

exact,
or nothing

The lab: attack your own file

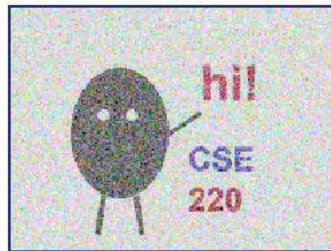

noise sweep

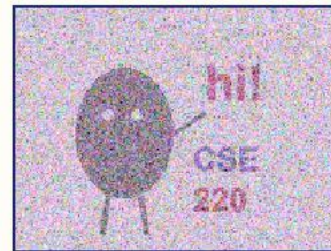

40 dB

survived

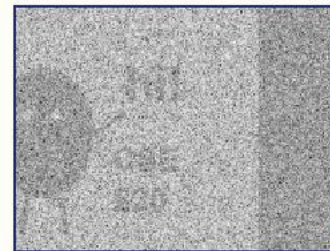

20 dB

survived

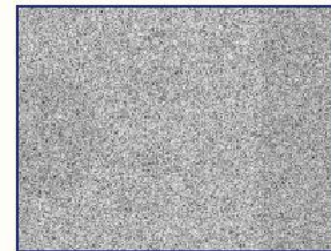

15 dB

damaged

10 dB

damaged

5 dB

lost

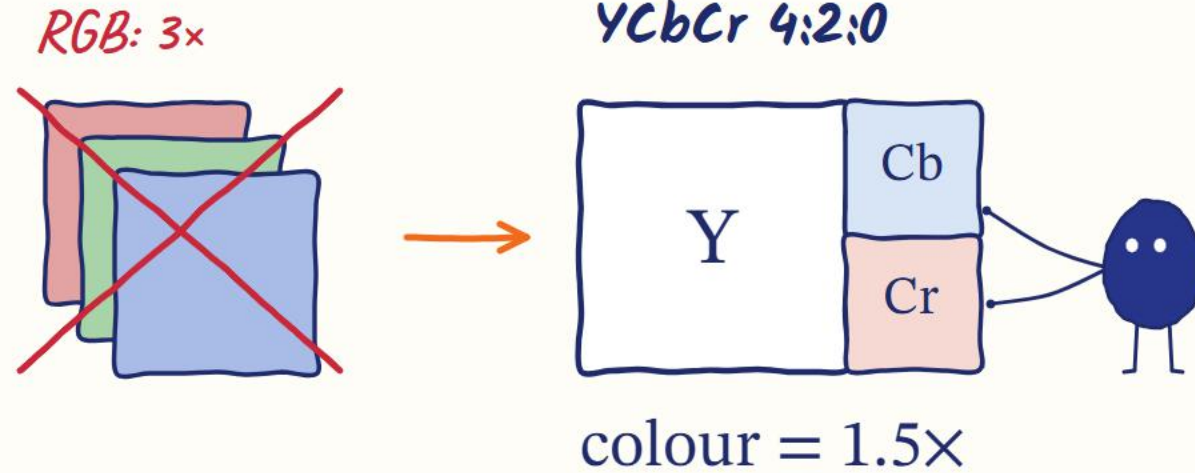

high-pass 10 kHz:
survives

low-pass 18 kHz:
lost

LIMITS

Size and limits

150 x 150 picture

13 s grey

19.5 s colour

files: 125 bytes / s

*MP3 and AAC
erase the band*

*anyone can
see it is there*

Thank you
